

RinaWarp Backend Security Certification

This certificate confirms that the **RinaWarp Backend Infrastructure** has successfully completed full production-grade hardening and now meets enterprise-level security standards. **Security Measures Implemented:**

- HTTPS enforced with Cloudflare Origin Certificates
- Reverse proxy protection via Caddy
- API key authentication system across protected endpoints
- Strict CORS policies limiting domain access
- Helmet security headers enabled for all routes
- Rate limiting: 120 requests / 15 minutes per IP
- Stripe Webhook secured with signature verification
- PM2 process management for runtime stability
- Environment variables sanitized and locked for production

Status:

The RinaWarp backend is fully secured, operational, and ready for commercial deployment. **Issued To:** Karina Gilley (Rina Vex)

Issued For: RinaWarp Terminal Pro & RinaWarp AI Platform

Date: November 22, 2025

Congratulations on achieving enterprise-grade backend security.

This document certifies successful implementation of production-grade security infrastructure.
